Art Unit: 2161

Status of Claims

1. Claims 1-40 have been examined.

Response to Amendment

2. The Applicant is of the opinion that the prior art of Ludwig et al. fails to teach: displaying at least two types of information for each user and a virtual room display means for displaying, for each user, diagram images indicating the user's virtual single-room office on the screen of the terminal device of the user. The Examiner respectfully disagrees. Ludwig et al. disclose a videoconferencing system where a workstation displays a user's working situation image and character information concerning the user's working situation (figures 2B, 8C, 22, 34, 36, 37, 40 and 41). Similarly, Ludwig et al. also provide display means for displaying the virtual office of the videoconferencing participants (figures 2B, 8C, 22, 34, 36, 37, 40 and 41). Ludwig et al. do not explicitly recite "single room office". However, as the system of Ludwig et al. display the user(s) in whatever environment he or she is (they are) in, be it indoors or outdoors (figures 2B, 8C, 40-42), it would necessarily encompass those participants who are broadcasting from a single room office.

Art Unit: 2161

In the previous Office Action (paper No.6), the Examiner took the following Official Notice,

the displaying of a user's image during a two-way multimedia exchange is well known. For example, during cable and television news segments, if a foreign correspondent is at a location that doesn't support the transmission of video data, a station will often provide viewers with a still image of the foreign correspondent and a map identifying his or her whereabouts (paper No. 6, page 9, lines 5-10).

The Applicant did not traverse the Examiner's assertion. Therefore, the Official Notice is common knowledge and admitted prior art.

The Examiner maintains the rejection to claims 1-40.

Claim Rejections - 35 USC § 112

3. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

4. Claims 1-40 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Claims 1 and 21 recite, "... virtual room display means for displaying, for each user, diagram images indicating the user's virtual single room office on the

Art Unit: 2161

screen of the terminal device of the user." The Examiner does not find support for this added limitation.

Claims 3-20 and 23-40 are also rejected as they depend from claims 1 and 21, respectively.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-5, 8-13, 16, 21-25, 28-33, are rejected under 35 U.S.C. 103(a) as being unpatentable over Ludwig et al., U.S. Patent No. 5,802,294.

As per claim 1-5, 8-13, 16, 21-25, 28-33 and 36, Ludwig et al. teach a distributed office system where remote users communicate using videoconferencing that displays an information aggregate including:

- user's working situation (figures 2A-B, 38-40)
- displaying data (e.g. character data) regarding a user's work
 situation, operation content and/or name (figures 2A-B, 8A-B, 37)
- displaying a user office and diagram image (figures 38-40)

Art Unit: 2161

- displays information concerning the plurality of users (figures 2A-B, 38-40)
- selecting of a user to be displayed and controlling how data is displayed (figures 37-40; column/line 26/15-27/5)
- communicating with users in different windows (figure 2A-B, 8A-B, 38-40)
- selecting means for selecting another user's office, input means to visit another the selected users office, displaying the user's office including work situation and fixtures (figures 8A-C)
- a server device that makes calls to the registered number of a selected user via a telephone board (figures 20-24; column/line 18/33-20/33; column 20, lines 65-67; column 21, lines 11-35; column 25, lines 3-45)
- cameras for capturing user images, image compression,
 conversion, image transmission to a server device, image display
 on a terminal device (figures 1, 2A-B, 4, 18A-B, 21, 31A-C; column
 10, lines 12-67; column 12, lines 45-55; column 17, lines 54-67;
 column 30, lines 11-67)

Ludwig et al. do not teach a diagram image indicating an entrance door with a window for viewing a working situation nor does Ludwig et al.

Art Unit: 2161

explicitly teach grouping users together by organization. However, Ludwig et al. do teach a window used to view a user's working situation and surroundings (figures 2A-B, 8A-B, 37; column 15, lines 17-23). Also, if a conference call is conducted between several organizations where each party is located in an onsite conference room at the party's respective organization, then it necessarily follows that the users belonging to the same organization are displayed in the same virtual office area (figures 37) and 38). Hence, as neither the "door" nor the "arrangement of images" provide additional functionality they are merely ornamental and/or a matter of design choice, therefore, it would have been obvious to one of ordinary skill of the art to use an office door icon instead of a face icon (figure 2A) to initiate and conduct videoconferencing and arrange videoconferencing participants on the screen by organization. Similarly, "... diagram images indicating the user's virtual single room office on the screen of the terminal device of the user" is also functional data. Therefore, it would have been obvious for a user to display on a user terminal device any image that the user that finds pleasing.

Regarding working situation display of a virtual user common space, this is taught by Ludwig et al.. Ludwig et al. implement their system using portable devices which implies to the Examiner that videoconferencing can take place anywhere. For example, Ludwig et al.

Art Unit: 2161

teach a conference that includes an outdoors caller in Central Mexico (figure 42; column 38, lines 22-36).

7. Claims 6, 7, 18-20, 26, 27 and 38-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ludwig et al., U.S. Patent No. 5,802,294 as applied to claims 1 and 21 above, and further in view of Brunson et al., 5,760,823 and Gerrszber et al., U.S. Patent No. 6,020,916.

Ludwig et al. teach a videoconferencing system that allows users simulate a face-to-face exchange over a remote network comprising: multimedia mail messages (column 6, lines 38-50; column 37, lines 57-67), management of videoconference calls that includes the system operating in "telephone mode" using telephonic techniques such as left messages, "hang up", "hold", "resume" and "refuse" (column 22, lines 1-43; column 23, lines 8-39; column/line 35/36-36/13), the use of a face icon corresponding to a user when the user is not communicating with a caller (column 23, lines 30-39), as well as video phones (figure 37; column 36, lines 1-15). Ludwig et al. also teach audio/visual messages that inform a user of the time of day or to remind the user of a time sensitive event (column 40, lines 26-33). However, Ludwig et al. do not specifically teach visual messaging. Brunson et al. teach a universal mailbox that stores incoming audio and video messages (abstract; figures 3, 6, 11-13; column/line 2/5-3/55) and receives input from audio and touch-tone ports and

Art Unit: 2161

video workstations (column 5, lines 12-24). The system of Brunson et al. also operates like an answering service (such as Audix –column 6, lines 13-23) or machine in that a subscriber or user can leave a personal visual greeting (column 7, lines 5-40). Therefore, regarding a message that informs a caller that the desired party (i.e. user/subscriber) is "on vacation", "on the other line", "at a meeting", "out to lunch" or "resting" what have been obvious to one of ordinary skill as such greeting well known in the art of telephonic and/or electronic messaging. Hence, it is a matter of design choice as to what type of visual greeting the user or subscriber wishes to leave. Therefore, it would have been obvious to one of ordinary skill of the art to combine the teachings of Ludwig et al. and Brunson et al. The motivation is as follows:

By implementing the video messaging with the system of Ludwig et al., the Expert can inform (or remind) organizations of his consulting hours, in the event a call is placed outside the time he/she has allotted for advising clients ('294, column 40, lines 25-35).

8. Claims 14, 15, 17, 34, 35 and 37 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ludwig et al., U.S. Patent No. 5,802,294 as applied to claims 1 and 21 above, and further in view of Palmer et al., 6,195,683.

As per claims 14, 15, 17, 34, 35 and 37, Ludwig et al. teach a teleconferencing system that utilizes an architecture arrangement that

Art Unit: 2161

accommodates users with varying multimedia handling capabilities (column 3, lines 42-50) and video workstations that receive video transmissions from laptop at a reduced frame rate (column 38, lines 31-49). Regarding the displaying of a registered user's image when no camera is available, Ludwig et al. teach the use of laptops with reduced functionality (column 15, lines 1-9), registering of service applications (column/line 20/65-21/12) and arranging connections based on registered data (column 38, lines 31-40). The Examiner takes Official Notice that the displaying of a user's image during a two-way multimedia exchange are well known. For example, during cable and television news segments, if a foreign correspondent is at a location that doesn't support the transmission of video data, a station will often provide viewers with a still image of the foreign correspondent and a map identifying his or her whereabouts. Therefore, it would have been obvious to display a registered image of a client or co-worker using a laptop with reduced capabilities in order to identify him or her to videoconferencing participants and to prevent lewd or offensive material from being displayed. Ludwig et al. also teach the registration of service applications (column/line 20/65-21/12) and arranging connections based on registered data (column 38, lines 31-40). However, Ludwig et al. do not teach frame rate control. Palmer et al. teach a system that allows participants to optimize the delivery of multimedia content during video-teleconference (abstract). In particular, Palmer et al. allow

Art Unit: 2161

users to control the frame rate of video content (figure 10, 21, 22; column/line 10/64-11/22; column 16, lines 40-60; column 17, lines 45-67; column 21, lines 7-18). Therefore, it would have been obvious to combine the teachings of Ludwig et al. and Palmer et al. The motivation is as follows:

By providing users of the Ludwig et al. system with multimedia transmission controls high performance videoconferencing can be conducted in real-time and without regard to bandwidth ('683, column 5, lines 17-32).

Conclusion

9. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**.

See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will

Art Unit: 2161

the statutory period for reply expire later than SIX MONTHS from the date of this final action.

- 10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:
 - Gore teaches a system for maintaining the current status of employees
 - Dozier et al. teach video workplace security system
- 11. Any inquiry concerning this communication or earlier communications from the Examiner should be directed to Calvin Loyd Hewitt II whose telephone number is (703) 308-8057. The Examiner can normally be reached on Monday-Friday from 8:30 AM-5:00 PM.

If attempts to reach the Examiner by telephone are unsuccessful, the Examiner's supervisor, James P. Trammell, can be reached at (703) 305-9768.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

c/o Technology Center 2100

Washington, D.C. 20231

or faxed to:

(703) 746-7239 (for formal communications intended for entry),

(703) 746-7238 (for after-final communications).

Art Unit: 2161

Ō۲:

(703) 746-7240 (for informal or draft communications, please label "PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 305-3900.
